

Hive meeting 12.00-12.30

Beyond ISO50001

By requiring you to demonstrate improved energy performance, ISO50001 has made a major leap forward. Envantage “raise the bar”, offering bespoke services that help you through certification and beyond, to deliver tangible energy and carbon savings.

Our systematic approach helps organisations to establish effective systems and processes to improve energy related performance and to identify energy reduction opportunities.

Before your organisation pursues certification, we will perform a thorough gap analysis. We will then explain the best way to close the gaps and help you work towards certification. Beyond certification we can provide further carbon reduction services.

Established in 2004 to provide an informed, innovative and inspiring energy and carbon consultancy, Envantage has achieved ISO50001, ISO14001 and ISO9001 status itself. If you require a simple, cost effective, no-nonsense approach to ISO50001, energy and carbon efficiency, join us at this hive meeting or speak to our team at stand 17.
